

## Contractor Safety Program Core Components

**Contractor Safety Manual:** Is designed to provide all contractors, including inspectors, sub-contractors and contract employees with Kinder Morgan's contractor expectations and essential Environmental, Health & Safety (EHS) information required to successfully complete tasks while working at Kinder Morgan facilities.

[www.kindermorgan.com/work/contractor\\_co/KMContractorSafety.pdf](http://www.kindermorgan.com/work/contractor_co/KMContractorSafety.pdf)

**Contractor Safety Evaluation Database:** The ISNetworld database allows Kinder Morgan to evaluate/select a contractor who has met the EHS requirements for the contractor safety program. It provides third party data evaluation of each contractor's supplied EHS information. The database has three key elements:

- EHS Questionnaire
- Automatic EHS Evaluation/Ranking
- Allows any Kinder Morgan hiring manager access to the Contractor's EHS supplied information and data.

Visit the [www.isnetworld.com](http://www.isnetworld.com) website for subscription information.

**Contractor Safety Orientation:** Before a contractor starts any job they must receive a general and a site specific safety orientation at least once a year. At a minimum this may be accomplished by reviewing:

- The Contractor Safety Manual and any Business Unit or Site Specific Safety requirements.

Verification of general and site specific safety orientation shall be in the form of:

- Attendees' signatures collected on Contractor Employee Safety Training Document

## Frequently Asked Questions

### Why does Kinder Morgan have a Contractor Safety Program?

The focus of Kinder Morgan's Contractor Safety Program is to improve the safety and health of all personnel who work at our facilities and to protect the environment in which we work. In addition, the program is driven by:
