Fungible Specifications For Regular Conventional Blendstock for Oxygenate Blending (CBOB). For Blending with 10% Denatured Fuel Ethanol (92% purity) as Defined in ASTM D4806.

This CBOB may not be combined with any other CBOB except CBOB having the same requirement for oxygenate type and amount.

All parameters must be met before blending with denatured fuel ethanol unless noted.

Product Grade:	Regular CBOB

- (a) Direct supplier or certifying laboratory must be BQ9000 certified.
- (b) Must meet ASTM D6751 latest revision, for all Table 1 properties not listed above.
- (c) Certifying laboratory must supply a BQF form if not BQ9000 certified.

Policy and Procedure for Establishing Product Quality Specifications

It is the Carrier's Policy to only receive, transport and distribute products that meet or exceed the local, state or federal requirements for product quality. Carrier reserves the right to impose more stringent product quality specifications due to operational considerations.

Procedure:

- Identify all local, state and federal laws and specifications pertaining to each grade of product transported via the pipeline network operated by Kinder Morgan.
- Identify any operational issues that may require the Carrier to adopt a specification other than those required by any local, state or federal regulation.
- In cases where the specification can be met by a range of values, Carrier reserves the right to conduct a survey of current Shippers. In such cases, each "Shipper" (Company) shall be entitled to a single vote. A simple majority among the Shippers will determine the specification in question. Carrier reserves the right to solicit additional information as needed and set the specification as Carrier deems necessary. All information obtained by the Carrier during a survey shall remain confidential.
- It is the Carrier's intent to publish any changes in product specifications at least 60-days prior to implementation whenever possible.
