

South Texas Enhancement Project Fact Sheet

Project Overview:

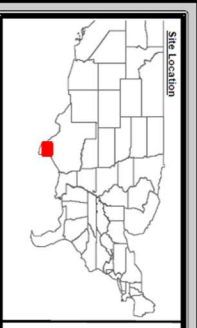

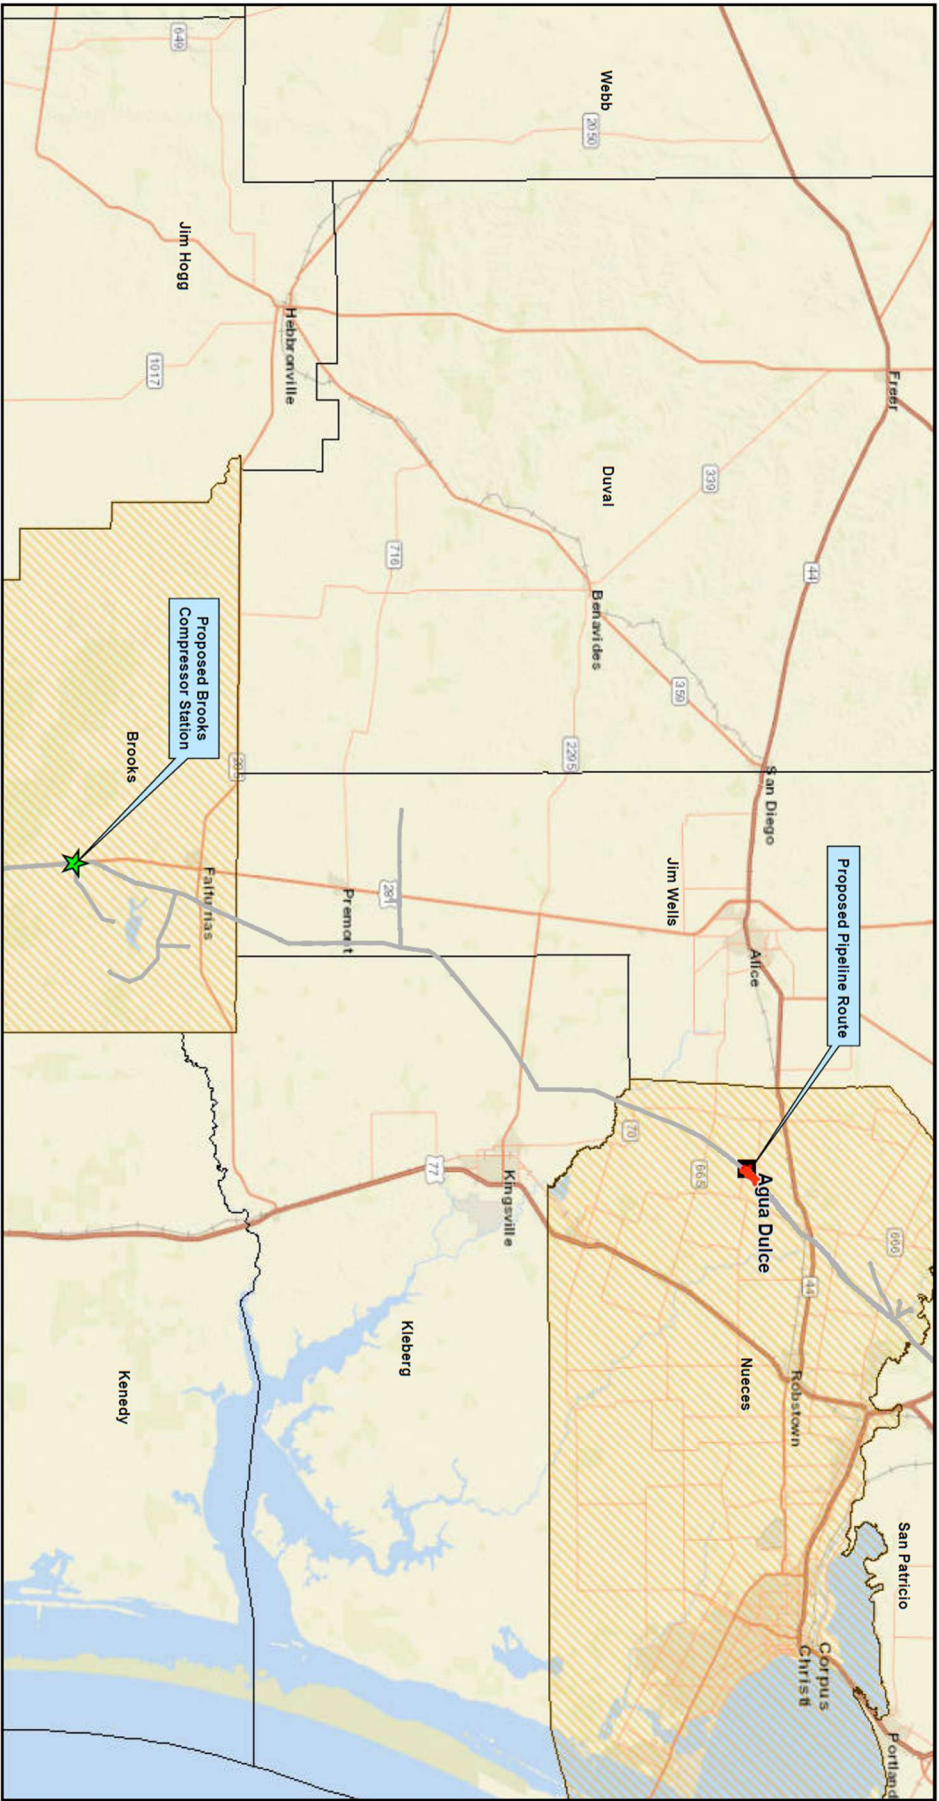

- The South Texas Enhancement Project (STEP) is being developed by Tennessee Gas Pipeline Company, L.L.C. (TGP), a Kinder Morgan company.
- This project allows higher-pressure gas to bypass the existing TGP 100 system and connect directly to the existing TGP 400 system, creating additional capacity from north of the Aqua Dulce Compressor Station to the Mexican border and enabling existing shippers to extend transportation paths under current contracts to access a more reliable gas supply.
- Includes construction of approximately 1.7 miles of new pipeline extending from the NET, GCX, and Whistler Meter Stations in Nueces County, Texas, south to interconnections with TGP's 400-1 and 400-2 lines near Agua Dulce, Texas (the STEP Loop).
- Includes installation of an overpressure protection facility between the new STEP Loop and TGP's 400-1 and 400-2 lines in Nueces County, Texas.
- Includes construction of one new compressor station, with approximately 16,000 horsepower, in Brooks County, Texas.
- Estimated total project cost is approximately \$92 million.
- Subject to review and oversight by several federal and state regulatory agencies, including the Federal Energy Regulatory Commission, U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, and the Advisory Council on Historic Preservation/Texas Historical Commission.

Project Benefits:

- The STEP expansion will extend existing shippers' transportation paths to other pipeline interconnection points, providing additional supplies for South Texas and Mexico markets.

Estimated Project Schedule:

- Agency and Stakeholder Meetings — Ongoing
- File Certificate Application — June 2026
- Begin Construction — Second Quarter 2027
- Proposed In-Service Date — Second Quarter 2028
