

CUSTOMER SCHEDULING PORTAL

Customers can access certain information about their movements on the Plantation system through Plantation's customer scheduling portal PCCI. PCCI is a Citrix based application that allows the customer to enter nominations as well as maintain and change nominations in the Plantation Batch Management System. The application allows the customer to view short and long range schedules, proration information and provides several downloadable reports. The interface also connects to the Plantation Products Accounting System and allows the customer to search tickets, invoices, inventory and the shipper carrier tax. Customers can also view all customer notices which are sent and then posted within the application.

To obtain a user account for this application, please send your request with full contact information to Jim Cook at jim_cook@kindermorgan.com.
