Southern Natural Gas Company, L.L.C.
a Kinder Morgan operated company

Southeast Connector Project Fact Sheet
November 2026

Project Overview:

- The Southeast Connector Project (SEC Project) is being developed by Southern Natural Gas Company, L.L.C. (SNG), a Delaware limited liability company equally owned by subsidiaries of Kinder Morgan and Southern Company.

- The SEC Project is currently designed to transport up to 2.6 billion cubic feet per day of natural gas and can be scaled further with additional customer commitments. The total project cost is expected to be approximately $7.6 billion, and the Kinder Morgan share of that cost is expected to be approximately $3.1 billion, though final capacity and capital expenditure levels will be determined depending on the ultimate project scope.

- The SEC Project will include approximately 470 miles of new pipeline and new and expanded compression.

- The SEC Project will transport natural gas from a receipt point near Tennessee Gas Pipeline Company, L.L.C.'s Compressor Station 87 in Sumner County, Tennessee to Monroe County, Georgia. The project is a market driven response to increased demand for transportation of natural gas to delivery points on SNG's system, ultimately serving increased residential, commercial, and industrial customers, as well as electric generation facilities fueled by natural gas. The project will provide critical reliability to the Southeastern energy grid.

- A number of federal and state regulatory agencies will review and have oversight of the SEC Project, including but not limited to the Federal Energy Regulatory Commission (FERC), the U.S. Army Corps of Engineers, the U.S. Fish and Wildlife Service, and the National Park Service.

- The SEC Project is expected to create approximately 7,000 temporary construction jobs and 50 permanent positions. Workers are expected to rely on local businesses, housing, and support services during construction, creating economic opportunities for communities along the route.

- Kinder Morgan is a proud operator of natural gas pipeline infrastructure in Tennessee, Alabama, and Georgia, contributing more than $38 million annually in state and local taxes to support schools, infrastructure, and essential community services.

Estimated Project Schedule:

- Submit FERC pre-filing request – Q4 2026
- Submit FERC Certificate application – Q3 2027
- Begin construction — Q4 2028
- Proposed in-service — Beginning Q4 2030, with additional phases to follow
